

Aztec Low Relief

Description of Technique

1. With the Model Magic modelling clay, create simple patterns that will be applied to a cardboard plate. Clay can be glued with white liquid glue, but it should stick to the cardboard by itself.
2. Let the clay dry for 24 hours.
3. Apply a coat of black tempera over the surface of the plate with the painted patterns. Let dry for a few hours.
4. To obtain a nice patina effect, choose metallic-coloured tempera and gently rub the surface of the plate in order to highlight the raised parts. Let dry.

Materials	BB Product Code
