

# Plaster Low Relief

## Description of Technique

1. Mould the clay in the shape of a biscuit at least 3cm thick.
2. Using coils of clay, make an edge about 3cm thick on the biscuit.
3. Make sure the edge is well attached to the biscuit.
4. Using chisels and jointers, create patterns and textures inside the biscuit.
5. The negative of the low and raised parts will be reproduced.
6. Prepare the plaster and pour it in the mould.
7. Let work harden.
8. Flip the low relief over and gently remove the clay.
